# Annual National Accounts

Gross Domestic Product  
**2005 - 2012**

June 2013

## Foreword

The Statistics Centre - Abu Dhabi (SCAD) is pleased to release National Accounts estimates for the Emirate of Abu Dhabi. The statistics in this publication are calculated using data from various sources including the annual economic survey, consumer price index, and other administrative and statistical sources. The publication can be used by planners, decision makers, government, companies and researchers to better understand the economic activity in the Emirate of Abu Dhabi. Data included in this release reflects the economic development taking place in the Emirate under the wise leadership of H.H. Sheikh Khalifa Bin Zayed Al Nahyan, President of the UAE and Ruler of Abu Dhabi, and the unlimited support of H.H. General Sheikh Mohammed Bin Zayed Al Nahyan – Crown Prince of Abu Dhabi and Deputy Supreme Commander of the Armed Forces, and Chairman of the Executive Council of Abu Dhabi.

The publication includes constant price annual GDP estimates, which are the official measure of growth of the economy in the Emirate of Abu Dhabi. Constant price estimates offers a more comprehensive image on economic growth.

Commentary is provided on the key GDP aggregates alongside analytical tables and graphs. In addition to this, notes that cover the more technical aspects of the released statistics have been provided. The glossary of terms and acronyms will give readers a good understanding of the terms and acronyms used in the publication. Data tables with longer time series and more detailed statistics suitable for analyzing and evaluating the performance of the economy are included.

I wish to thank all of our partnership entities in the Emirate, which have provided SCAD with administrative data, and all of the businesses which have responded to our economic surveys. Without their support and cooperation, SCAD would not be able to produce such quality statistics, as we have in this official statistical release, based on real evidence.

Butti Ahmed Mohammed Bin Butti Al Qubaisi

Director General

June 2013

## Introduction

This publication includes Gross Domestic Product (GDP) and related statistics in both current and constant prices for the Emirate of Abu Dhabi. The constant price statistics are a recent addition to the range of official statistical outputs produced by Statistics Centre Abu Dhabi.

GDP in current prices measures the value of output during a given year in the prices for that year. GDP in current prices as well as the value of production consists of two components, a price and a volume (or quantity). For a specified period of time, the price reflects the prices for each good and service produced while the volume reflects the quantity of all of the goods and services produced.

Because prices and volumes can move independently, i.e. in different directions and at different rates of change, it is useful to separate GDP in current prices into these two components.

The change in GDP in current prices reflects the change in both the prices and volumes of production. GDP estimates in constant prices remove the effect of price changes, and thus reflect the actual change in the economy. The price component is essentially a price index, and is referred to as the GDP deflator. The GDP deflator is a measure of average prices in the economy for a particular time period. GDP in constant prices is a measure of the quantity of goods and services produced for that same time period.

GDP in constant prices is viewed internationally as the preferred measure of economic growth over time, because it shows the volume of production in a specific year using the base year prices. It is commonly viewed as the main economic indicator, as it shows the business cycle of real economic activity. It is calculated by two methods:

- removing the price effect by dividing GDP in current prices by a price index; this is called *deflation*; and
- direct estimation of the quantities of goods and services produced in a specific year; this is called *extrapolation*.

The statistics in this release have been provided by activity. Each activity represents a grouping of industrial units that have a similar production process. This grouping enables an analysis of the data in specific areas of the economy.

GDP can be calculated by three different approaches namely the production, income, and expenditure approaches. The calculation of each approach uses different data sources to calculate GDP.

The three approaches are complementary (not alternatives) to each other; some activities can be estimated using the income approach, while other activities can be estimated using the production or expenditure approaches. In this release, the production approach has been used. The production approach calculates GDP by subtracting intermediate consumption from total production.

## Key Points

- GDP in current prices increased by 7.7% to AED 912 billion in 2012 compared with AED 847 billion in 2011.
- GDP per capita was AED 390 thousand in 2012 compared with AED 392 in 2011.
- GDP in constant prices increased by 5.6% in 2012 following an increase of 9.3% in 2011.
- The value added of oil activities in current prices increased by 6.2% and non-oil activities by 9.6% during 2012.
- Compensation of employees showed an increase of 9.1% to AED 164.1 billion in 2012 compared with AED 150.4 billion in 2011.
- Gross fixed capital formation increased by 5.3% to AED 172.7 billion in 2012 compared with AED 164.0 billion in 2011.

## Gross Domestic Product in Current Prices by Component

The value of GDP in current prices was AED 911.6 billion in 2012 compared with AED 846.7 billion in 2011, a growth rate of 7.7% over the period. The increase in GDP was driven by a rise in production by all economic activities.

Positive growth rates for all economic activities contributed to the increase in GDP with the value added of the construction activity increasing by 5.0% in 2012 compared with 0.9% in 2011. The growth rate of value added in the oil and gas activity decreased from 52.8% in 2011 to 6.2% in 2012. This was mainly due to low increases in both the volumes of production and prices of this activity.

The average growth rate of 7.7% for GDP in 2012 was lower than the 32.3% for 2011. This was mainly due to the lower average growth rate in the value added of the oil and gas activities mentioned above.

**Table 1: Gross Domestic Product in current prices**

Value in million AED

Production measure	2008	mvt (%)	2009	mvt (%)	2010	mvt (%)	2011	mvt (%)	2012*
Oil	412,774	-42.1	239,006	32.7	317,237	52.8	484,737	6.2	514,847

\*Preliminary estimates

## Gross Domestic Product in Current Prices by Activity

GDP in current prices increased by 7.7% in 2012, and was mainly due to the 9.6% increase in non-oil activities. These activities have recorded positive rates of change over recent years and played an important role in the growth of GDP. Oil activities contributed AED 514.9 billion to GDP in 2012. This was the highest level following the previous peak in 2011 of AED 484.7 billion. Oil activities accounted for 56.5% of GDP in 2012 compared with 57.3% in 2011.

Non-oil activities in current prices increased by 9.6% in 2012. These activities have seen strong increases in the last three years following the slight growth in 2009. This continued growth in addition to low growth in the oil and gas sector resulted in the increase in the contribution of non-oil activities to GDP from 42.7% in 2011 to 43.5% in 2012. The small increase in oil prices in 2012 had a stabilizing impact on the contribution of oil activities to GDP compared with 2011. The contribution of oil activities to GDP was 56.5% in 2012, 57.3% in 2011 and 49.6% in 2010.

The main contributors to the increase in non-oil activities were “Manufacturing”, “Wholesale and retail trade”, and “Real estate” activities. In 2012, Manufacturing, “Wholesale and retail trade”, and “Real estate” activities increased by 11.2%, 14.5% and 15.0% respectively.

Source: Statistics Centre - Abu Dhabi

## Gross Domestic Product in Constant 2007 Prices by Activity

GDP in constant 2007 prices increased by 5.6% in 2012 following an increase of 9.3% in 2011. Oil activities grew at 3.8% while non-oil activities rose by 7.7% during the period. The growth in oil activities was influenced by increasing world demand for oil products. Non-oil activities have shown stable and sustained strong growth since 2005 with the increases ranging between 5% and 9% over this time.

The main contributors to the increase in constant price non-oil activities from 2011 to 2012 were “Real estate” activities with 16.8% and “Manufacturing” with 9.7%. The strong increases in these activities were partly due to large value sales of property by developers in 2011 and 2012. “Professional, scientific and technical” activities and “Administrative and support service” activities both grew by 13.9% in 2012 following increases of 4.3% and 19.3% respectively in 2011.

The GDP deflator index recorded an increase of 1.9% in 2012 following strong increases of 21.0% in 2011 and 12.3% in 2010 and a decrease of -20.1% in 2009. Volatility in this index can be attributed to fluctuations in the crude oil price.

**Table 2: Gross Domestic Product in constant 2007 prices**

Value in billion AED

GDP	2008	mvt (%)	2009	mvt (%)	2010	mvt (%)	2011	mvt (%)	2012*
Oil	330,515	-13.9	284,570	6.8	303,891	11.7	339,575	3.8	352,616

## Technical Notes

### Compilation framework

The statistics has been compiled using the System of National Accounts 1993 international framework.

### Classification framework

The International Standard Industrial Classification Rev 4 (ISIC4) has been used for the compilation of the statistics by economic activity. The ISIC3.1 and ISIC4 series by activity will not be comparable due to the changes between the classifications. The series prior to 2008 have been converted from ISIC3.1 to ISIC4; the data were converted in order to provide a sufficient statistical time series to users. Concordances and ratios were applied to convert the data; however ISIC4 is a more detailed classification and, for some activities, users should expect more variance in the data than usual. The detailed data are published at the section (1 digit) level of ISIC4 with two exceptions. D-Electricity, gas, steam and air conditioning supply and E-Water supply; sewerage, waste management and remediation have been combined into Electricity, gas and water supply; waste management activities due to the small size of the latter. R-Arts, entertainment and recreation and S-Other service activities have been combined into Arts, recreation and other service activities due to the small size of both. More information on ISIC4 can be found at the following address: <http://unstats.un.org/unsd/cr/registry/isic-4.asp>

### Economic territory

The statistical estimates measure all economic activity of institutional units resident to the Emirate of Abu Dhabi. Activity of units that are not resident to the Emirate of Abu Dhabi is excluded. Many units in the UAE whether resident or non-resident to Abu Dhabi Emirate have branches across multiple emirates. This can often lead to difficulties in collecting Abu Dhabi-only data, particularly when the head office is located in another emirate. SCAD is working towards implementing new collection strategies that will minimize the impact of this issue on the national accounts.

### Data sources

The main data source for the current price series is the SCAD Annual Economic Survey. However many other data sources have been used to supplement the survey data in order to best compile the statistical estimates. Other data sources include, but are not limited to, the consumer price index; building materials prices; government financial data; administrative data from other Government and non-government entities; other survey data; international commodity prices; other international statistical agency data; and OPEC data.

The table below lists the main data sources currently used in the compilation of the accounts in this publication. It should be noted that the data sources will change over time as more data sources are developed and improved.

<b>Activity</b>	<b>Current price data source</b>	<b>Constant price data source</b>	<b>Price deflator</b>
Agriculture, forestry and fishing	Various agricultural and fishing data sources published by SCAD	Calculation <sup>(1)</sup>	Agriculture producer price index
Mining and quarrying (includes crude oil and natural gas)	Annual Economic Survey	Oil and related products production volumes data	Calculation <sup>(1)</sup>
Manufacturing	Annual Economic Survey	Refined and petrochemical production volumes data; Calculation <sup>(1)</sup>	Consumer price index; Building materials price index; International commodity prices; Calculation <sup>(1)</sup>
Electricity, gas, and water supply; waste management activities	Annual Economic Survey	Electricity and water production data	Calculation <sup>(1)</sup>
Construction	Annual Economic Survey	Calculation <sup>(1)</sup>	Building materials price index
Wholesale and retail trade; repair of motor vehicles and motorcycles	Annual Economic Survey	Calculation <sup>(1)</sup>	Consumer price index
Transportation and storage	Annual Economic Survey	Air and water transportation volumes data; Calculation <sup>(1)</sup>	Consumer price index; Calculation <sup>(1)</sup>
Accommodation and food service activities	Annual Economic Survey	Hotel guest nights; Calculation <sup>(1)</sup>	Consumer price index; Calculation <sup>(1)</sup>
Information and communication	Annual Economic Survey	Calculation <sup>(1)</sup>	Consumer price index
Financial and insurance activities	Annual Economic Survey	Calculation <sup>(1)</sup>	GDP price deflator
Real estate activities	Annual Economic Survey; Calculation	Population data; Calculation <sup>(1)</sup>	Consumer price index
Professional, scientific and technical activities	Annual Economic Survey	Calculation <sup>(1)</sup>	Consumer price index
Administrative and support service activities	Annual Economic Survey	Calculation <sup>(1)</sup>	Consumer price index
Public administration and defence; compulsory social security	Annual Economic Survey; Government Financial Accounts data	Calculation <sup>(1)</sup>	Consumer price index
Education	Annual Economic Survey; Government Financial Accounts data	Number of pupils	Calculation <sup>(1)</sup>
Human health and social work activities	Annual Economic Survey; Government Financial Accounts data	Calculation <sup>(1)</sup>	Consumer price index
Arts, recreation and other service activities	Annual Economic Survey	Calculation <sup>(1)</sup>	Consumer price index
Activities of households as employers	Calculation <sup>(1)</sup>	Number of staff employed by households	Consumer price index

Imputed bank services	Annual Economic Survey	Calculation <sup>(1)</sup>	GDP price deflator
-----------------------	------------------------	----------------------------	--------------------

Note: 1. Calculation refers to the value or part of the value being calculated from data sources listed in the other columns via price deflation or volume extrapolation.

### **Constant price methodology**

The constant price statistics have been calculated using different methodologies to remove the price effect. The two methods used are price deflation and volume extrapolation. Price deflation requires that a current price series is divided by a price deflator series; this creates a constant price series. Volume extrapolation requires a current price series and a volume indicator series. This method applies the growth rates of the volume indicator series to the current price series in the base year to create a constant price series.

### **Reference and base year 2007**

The constant price statistics have a reference and base year of 2007. This means that the constant price series are in the prices of the 2007 year and that the current price and constant price levels will be the same in this year. This also means that the weights used in the calculation of the constant price statistics are predominantly based on 2007 data. The year 2007 was chosen since the majority of the weights are available in this year, particularly the consumer price index, which has a 2007 base year and is one of the key price deflators used.

### **Survey frame update**

The economic surveys performed by SCAD are based on a comprehensive unit record data frame maintained by SCAD. This register is used in the selection and weighting of surveyed establishments. In 2010 SCAD undertook a large scale project to update the frame and a newly updated frame has been completed and used for the AES 2009. This created significant change in the level of some activities and partly contributes to the increased data variance between the 2008 and 2009 years. The variance is due to the birth or death of establishments to the survey frame, as well as the change in details (such as size and activity) of establishments common to the old and the new frames.

### **Revisions policy**

The estimates in this publication are based on primary data and methods. Once these primary data are incorporated into the accounts, these are considered final for that year and are not revised unless further primary data from new sources become available. Normal international practice in producing, and continuously improving, quality official statistics is to make revisions over time as significant new evidence becomes available to official statistical agencies.

### **Future publications**

Data for the 2012 reference year will also be available in the SCAD Statistical Yearbook 2013, based on secondary data and methods. Estimates for 2012 are preliminary and will accordingly be revised once primary data becomes available.

## Glossary of Terms and Acronyms

**AED:** Arab Emirates Dirham

**Compensation of employees:** Compensation of employees is the total remuneration, in cash or in kind, payable by an enterprise to an employee in return for work done by the latter during the accounting period.

**Gross Domestic Product (GDP):** This refers to the market value of all final goods and services produced within a country in a given period.

**GDP deflator index:** This is a price index that shows how the price for GDP has changed over time. This is calculated by dividing the current price GDP series by the constant price GDP series and multiplying the result by 100.

**Constant prices:** This refers to the series which have been obtained by removing the effect of price changes over time from the values of flows or stocks of goods and services.

**Current prices:** This refers to the series being valued at the prices current at the time the activity takes place.

**Production measure of GDP:** Production less Intermediate consumption.

**GDP per capita:** This is calculated as GDP divided by the total population. GDP per capita is seen as an indicator of standard of living.

**Gross fixed capital formation:** Gross fixed capital formation is measured by the total value of a producer's acquisitions, less disposals, of fixed assets during the accounting period plus certain additions to the value of non-produced assets (such as subsoil assets or major improvements in the quantity, quality or productivity of land) realised by the productive activity of institutional units.

**Intermediate consumption:** This is an accounting flow which consists of the total monetary value of goods and services consumed or used up as inputs in production by enterprises, including raw materials, services and various other operating expenses.

**Oil activities:** This refers to the Mining and quarrying (including crude oil and natural gas) activity only. This does not include related crude oil and natural gas activities such as refining, petrochemicals, distribution, or transport.

**Mvt (movement):** Year on year percentage change.

**Non-Oil activities:** This refer to all activities with the only exception being Mining and quarrying (including crude oil and natural gas).

**Preliminary estimates:** Estimates that have been calculated using only secondary data sources and methods. Users of these data should be aware that preliminary estimates will be revised when primary data sources become available for that time period.

**Production (also called Output or Gross output):** Output consists of those goods or services that are produced within an establishment that become available for use outside that establishment, plus any goods and services produced for own final use.

**Value added:** Gross value added is the value of output less the value of intermediate consumption; it is a measure of the contribution to GDP made by an individual producer, industry or sector.
