Tables	23

## **Introduction**

The Consumer Price Index (CPI) is a statistical indicator that is constructed to measure changes in the general level of prices of consumer goods and services that households use or pay for. This is done by measuring the cost of purchasing a basket of consumer goods and services of constant quality and similar characteristics, with the products in the basket selected to be representative of households' expenditure during a year or other specified period. The figures thus calculated constitute a time series that provides a measure of changes in the cost of living over time.

Statistics Centre - Abu Dhabi collects the prices of these goods and services on a regular basis and publishes monthly, quarterly and annual indicators derived from this data, following the methodologies adopted internationally in this field.

The Price Indices Section at the Statistics Centre - Abu Dhabi compile the CPI according to households' levels of welfare and type. For the welfare level approach, the population is divided into five segments (quintiles), which represent five standard of living levels based on average annual expenditure per capita.

For the household type approach, the population is divided into three types of households as set out in the results of the Household Income and Expenditure Survey (2007-2008), namely, Citizen, Non-Citizen and Share households.

To represent all regions of the Emirate, the selected sample of items included in the Consumer Price Index basket uses actual data from the 2007/ 2008 Household Income and Expenditure Survey. The sample of outlets were selected in such a way to represent points of purchase for a large base of consumers all over the Emirate of Abu Dhabi, taking into account the geographical distribution of sources within the Emirate.

## **Consumer Price Index**

The Consumer Price Index is a tool that measures the rate of change in the prices of a range of goods and services between two time periods. The period against which prices are compared is known as the base period and the period under review is known as the comparison period. Indices are extremely important instruments that are simple to define, but complex in composition. This is due to the large number of variables that must be taken into account to produce them. The most significant of these include the selection of a suitable sample that represents the required index, the weights of goods, the most common prices for certain goods, seasonal goods, the disappearance of certain goods from the market during the period under review, and the required dissemination level; in addition to the problems encountered in collecting data from the marketplace. In its simple definition, an index is “a figure used to compare the relative change in any phenomenon (or set of phenomena) over a given period of time.”

### **Why is the Consumer Price Index important?**

The CPI provides monthly estimates on the rate of change in the prices of a consumer price basket in the Emirate of Abu Dhabi. Some of the significant uses of the CPI are:

- The CPI is used as an important economic indicator to calculate inflation rates. The Inflation rate is a key statistic for economic policy making and is used for the purpose of adjusting payments (such as rents and wages).
- Salaries and wages are being adjusted by international entities and big corporations based on the change taking place in the CPI.
- The CPI is used as a deflator while producing national accounts statistics at constant prices.

### **Updating the Consumer Price Index**

The Consumer Price Index weights are updated on a regular basis once the necessary data becomes available. Usually the update takes place after releasing the results of the Household Income and Expenditure Survey, which is carried out periodically about every five years. Updating Weights of goods and services of the CPI basket ensure that these Weights represent as close as possible the current consumption pattern of households. The last CPI update in the Emirate of Abu Dhabi took place in 2007-2008, where 2007 was regarded as the new CPI base year for both weights and prices.

## 1. Consumer Price Index (CPI) for the year 2012 (100=2007)

### Key Points

- The annual inflation rate of consumer prices was 1.1% in 2012 compared with 2011, as shown by the increase in the CPI to 122.9 points during the twelve months of 2012, up from 121.6 points during the same period of 2011.
- The "Restaurants and hotels" group, accounted for 51.8% of the increase. This contribution resulted mainly from an increase of 16.4% in the prices of this group.
- The "Food and non-alcoholic beverages" group accounted for 44.8% of the increase. The prices of this group increased by 2.9%.
- The "Education" group accounted for 12.5% of the overall increase during the twelve months of 2012 compared with the same period of 2011.
- Among the main groups that slowed down the rise in consumer prices during the twelve months of 2012 compared with the same period of 2011, was the "Housing, water, electricity, gas and other fuels" group which contributed -45.7%. The prices of this group decreased by 1.3%.

**Figure 1: CPI during the months of 2011 and 2012**

Source: Statistics Centre - Abu Dhabi

## **2. Monthly indices of the main expenditure groups compared with the general price index**

Figure (2) Shows that the sub-index for “Food and non-alcoholic beverages” was higher than the general index during all months in 2012. This group consistently contributed to the increase in the index in 2012. The average index for “Food and non-alcoholic beverages” in 2012 was 138.4 points, while the general consumer price index was at 122.9 points.

**Figure 2: Price trend of the “Food and non-alcoholic beverages” group compared with the general price index during the months of 2012**

**Source:** Statistics Centre - Abu Dhabi

Figure (3) shows that the average prices in 2012 for the “Alcoholic beverages and tobacco” group remained higher than the average overall price, with the group’s sub-index at 131.8 points, compared with 122.9 points for the general consumer price index.

**Figure 3: Price trend of the “Alcoholic beverages and tobacco” group compared with the general price index during the months of 2012**

Source: Statistics Centre - Abu Dhabi

The “Clothing and footwear” group contributed to a decrease in price levels during 2012. The level of prices of the “Clothing and footwear” group was lower than the general price level for all months in 2012, with the consumer price index for the “Clothing and footwear” group at 98.7 points while the general consumer price index was 122.9 points.

**Figure 4: Price trend of the “Clothing and footwear” group compared with the general price index during the months of 2012**

Source: Statistics Centre - Abu Dhabi

Figure (5) shows that the price level of the “Housing, water, electricity, gas and other fuels” group was higher than the general consumer price index until August 2012. The group, which has a weight of about 38 per cent, with rents being its most important component, has contributed to a general decrease in price levels from September 2012.

**Figure 5: Price trend of the “Housing, water, electricity, gas and other fuels” group compared with the general price index during the months of 2012**

Source: Statistics Centre - Abu Dhabi

Figures (6) show the consumer price index for the “Furnishings, household equipment and routine household maintenance” group compared with the general index for 2012. This group contributed to an increase in the overall level of prices during 2012. The 2012 average annual consumer price index for the “Furnishings, household equipment and routine household maintenance” group was 124.5 points while the general consumer price index for the same period was 122.9 points.

**Figure 6: Price trend of the “Furnishings, household equipment and routine household maintenance” group compared with the general price index during the months of 2012**

Source: Statistics Centre - Abu Dhabi

Figure (7) shows the direction of the index for the “Health” group compared with the general index in 2012. This group contributed to a decrease in price levels during 2012 with the average consumer price index for this group at 114.0, compared with 122.9 points for the general consumer price index.

**Figure 7: Price trend of the “Health” group compared with the general price index during the months of 2012**

Source: Statistics Centre - Abu Dhabi

Figure (8): shows the direction of the index for “Transport” compared with the general consumer price index in 2012. It has contributed to stability in the overall price level in 2012 with the average price index for this group at 122.9, which was similar to the general consumer price index for 2012.

**Figure 8: Price trend of the “Transportation” group compared with the general price index during the months of 2012**

**Source:** Statistics Centre - Abu Dhabi

The “Communication” group contributed to a decrease in the overall price level in 2012 as shown in figure (9), with the price level for this group lower than the general consumer price index for 2012.

**Figure 9: Price trend of the “Communication” group compared with the general price index during the months of 2012**

Source: Statistics Centre - Abu Dhabi

Figure (10) shows the direction of the index for “Recreation and culture” compared with the general index in 2012. This group has contributed to a decrease in the overall price levels in 2012 with the price index for this group at 108.1, compared with 122.9 points for the general consumer price index.

**Figure 10: Price trend of the “Recreation and culture” group compared with the general price index during the months of 2012**

Source: Statistics Centre - Abu Dhabi

Both the “Education” and “Restaurants and hotels” groups contributed to the higher general level of prices during 2012. Figures (11) and (12) show the high levels of prices for those two groups compared with the general price levels.

**Figure 11: Price trend of the “Education” group compared with the general price index during the months for 2012**

Source: Statistics Centre - Abu Dhabi

**Figure 12: Price trend of the “Restaurants and hotels” group compared with the general index during the months for 2012**

Source: Statistics Centre - Abu Dhabi

The levels of prices in 2012 for the "miscellaneous goods and services" group was lower than the general price level, thus the prices of this group have contributed to reducing the general price level in 2012.

**Figure 13: Price trend of the “Miscellaneous goods and services” group compared with the general price index during the months of 2012**

**Source:** Statistics Centre - Abu Dhabi

### **3. Monthly and annual Consumer Price Index (2011 – 2012)**

Figure (14) depicts the change in the consumer price index during the months of 2011 and 2012.

**Figure 14: Monthly Consumer Price Index 2011 – 2012**

**Source:** Statistics Centre - Abu Dhabi

Figure (15) depicts the change in the annual inflation rate for the months of 2012.

**Figure 15: Annual rates of inflation for the months of 2012**

**Source:** Statistics Centre - Abu Dhabi

Figure (16) shows the annual rate of inflation from 1996 to 2012. The annual inflation rate which dropped significantly from 14.9% in 2008 to 0.8% in 2009, increased to 3.1% in 2010. However, since then the annual inflation rate decreased consistently to 1.1% in 2012.

**Figure 16: Annual inflation rates 1996 – 2012**

**Source:** Statistics Centre - Abu Dhabi

#### 4. Consumer price index by household welfare level for 2012

The rise of 1.1% in consumer prices during the twelve months of 2012 compared with the same period in 2011, resulted in a surge of 1.3% in consumer prices for households of the bottom welfare quintile for the same period of comparison. The corresponding rise for other welfare levels was 1.1% for households of the top quintile and 1.2% for the middle quintile.

**Table (1): Average CPI values by household welfare level for the twelve months of 2011 and 2012**

Period	Bottom Level	Bottom-Middle Level	Middle Level	Top-Middle Level	Top Level	All households
— CPI —						
2011	121.9	122.6	122.5	122.1	120.6	121.6
2012	123.5	124.2	123.9	123.3	121.9	122.9
— % —						
Relative Change	1.3	1.3	1.2	1.0	1.1	1.1

Source: Statistics Centre - Abu Dhabi

Figure 17 below shows the average CPI values and percentage change, detailed by household welfare level for the months of 2012 and 2011.

**Figure 17: Monthly Consumer Price Index from January 2011 to December 2012 by Household Welfare levels**

Source: Statistics Centre - Abu Dhabi

## 5. Consumer price index by household type for 2012

The 1.1% rise in consumer prices for the twelve months of 2012 compared with the same period of 2011, pushed up consumer prices for citizen households by 1.2%, non-citizen households by 1.0% and share households by 1.6%.

**Table (2): Average CPI values for the twelve months of 2011 and 2012 by household type**

Period	Citizen	Non-Citizen	Share	All households
— CPI —				
2011	121.0	122.3	121.3	121.6
2012	122.5	123.5	123.3	122.9
— % —				
Relative Change	1.2	1.0	1.6	1.1

Source: Statistics Centre - Abu Dhabi

## **Monthly Consumer Price Index (CPI) Calculation Method**

Statistics Centre- Abu Dhabi is the sole official body responsible for calculating and publishing the Consumer Price Index (CPI) within the Emirate of Abu Dhabi. The Centre updated the CPI base year to 2007 for both prices and weights. Weights that are used in the new CPI were calculated using the results derived from the Household Income and Expenditure Survey 2007-2008, which was carried out in the Emirate of Abu Dhabi. The methodology used in calculating the CPI follows best international recommendations and practices in this field.

### **1. CPI Compilation**

The CPI is calculated using the Laspeyres method  $CPI_L = \sum \frac{P_{1i}}{P_{0i}} \times W_{0i}$

Prices of goods and services of the CPI basket are collected periodically, except for vegetables, fruits, meat, fish and chicken groups which are collected on a weekly basis due to the continuous change that occur in its prices. Rentals prices are collected quarterly, while education fee prices are collected semi- annually.

The current CPI uses 2007 as the base year in Abu Dhabi region. The current CPI basket consists of 334 goods and services, while the consumer basket contains 760 goods and services. The new CPI included the CPI of residential units occupied by their owners; this was done by adding the weight of this item to the weight of the rented residential units followed by calculation of a single index for all rented units.

The average item price is calculated “on the main group level” using the geometric mean of elementary aggregates. The price ratio is calculated by dividing the comparison price by the base price, while the new price is calculated by multiplying by the base price.

To calculate the CPI on the sub- group level, the new weight of all goods and services of the sub-group should be added and then divided by the base price of the same group. The CPI of the main groups and the general CPI are calculated using the same method.

## **2. Weights**

The Consumer Price Index is a weighted average of the change in the price of goods and services of the CPI basket. The weight of the good or service reflects its relative importance. The weight of good (C) is calculated by dividing the total expenditure of the household on the good (C) by the total expenditure of the household on all goods and services.

The relative importance<sup>1</sup> of goods and services were calculated based on the results of the 2007-2008 Household Income and Expenditure Survey. Goods and services with a weight of 0.002 per cent or more were included in the CPI basket of goods and services. Goods with weights below this value were distributed proportionally among the other goods in the same group.

## **3. CPI basket and Consumer basket**

After calculating weights and identifying goods and services representing the CPI, the 334 goods and services in the consumer basket was identified. Each item in the CPI basket is represented by one good or service or more, therefore the consumer basket is larger than the CPI basket. The CPI basket includes 760 goods and services.

## **4. Classifications used in the CPI**

The Classification of Individual Consumption according to Purpose (COICOP) is used in the construction of the CPI. The COICOP is a United Nations classification, which is used for statistical purposes. Based on the COICOP, goods and services of the CPI basket were classified into the main 12 groups, 34 subgroups (three digits) and 63 subgroups (three digits). The following table shows the main groups (one digit) and their Weights:

---

<sup>1</sup> Relative importance of a given good or the weight of the good is the total expenditure of the household on the good divided by the total expenditure of all households on that good

<b>COICOP Classification</b>	<b>Main Expenditure Groups</b>	<b>Weight</b>
	Total	100.0
1	Food and non-alcoholic beverages	16.1
2	Alcoholic beverages and tobacco	0.3
3	Clothing and footwear	9.8
4	Housing, water, electricity, gas and other fuels	37.9
5	Furnishings, household equipment and routine household maintenance	4.8
6	Health	0.8
7	Transport	9.7
8	Communication	7.7
9	Recreation and culture	2.4
10	Education	2.6
11	Restaurants and hotels	3.4
12	Miscellaneous goods and services	4.6

## 5. The Classification used in the CPI by household welfare

According to this classification, households were divided into five segments based on the average expenditure per capita in 2007, when the last Household Income and Expenditure Survey was carried out.

The bottom welfare quintile represented the segment with the lowest income, while the top welfare quintile represented the segment with the highest income.

### Average expenditure per capita

Welfare	Lowest	Highest	Average
Low	2,683.3	11,122.0	7,838.7
Low middle	11,125.8	16,887.4	14,069.6
Middle	16,896.2	23,716.1	20,260.2
Upper middle	23,732.4	34,606.9	28,685.6
Top	34,631.6	422,932.4	52,720.3

## **6. Classification used in the CPI by household type**

According to this classification, households were divided into three types, citizen, non-citizen and share households:

- Citizen household: is one person or more from the UAE citizens, who live permanently in the Emirate of Abu Dhabi. They should have a head, while their members might be related to each other or not and they should share accommodation and food.
- Non- citizen household; is one person or more who are non UAE citizen. The members of the non-citizen household should share accommodation and food, while they might be related or not and they should have a head. The household is considered non- citizen if the head is non-citizen and wife is non-citizen, even if the wife has citizen children from a previous marriage.
- Share household: is a group of persons (more than three) regardless of their nationalities. It should have a head and their members might be related to each other or not. The members of the share household share accommodation but they normally do not share food.

## **7. Geographical Scope**

The current geographical scope of SCAD covers the Emirate of Abu Dhabi including all sub regions. However, the comprehensive coverage to the whole Emirate is essential but it requires a huge effort in order to collect the prices on a regular basis from all the regions of the Emirate.

## **8. Sources of Goods and Services**

Sources used for the collection of price data were determined through field visits conducted by a team from SCAD's Price Indices Section. The team updates SCAD on a regular basis if any source closes down or relocates premises. While choosing a source, it has been taken into consideration that it should represent a large segment of consumers in the Emirates of Abu Dhabi. Price data are currently collected from 180 sources.

## **9. Collection of Price Data**

Price data collection is a crucial stage that requires a significant amount of time and effort. The collection of price data is conducted by a group of employees who are well trained. To ensure the accuracy of the collected prices, the price of a sample of goods and services are reviewed through field visits. Each group of prices is collected differently, some is collected weekly, and others are collected monthly and quarterly.

In order to develop the price collection mechanism and cope with the latest IT trends, SCAD developed a comprehensive system that aims at calculating CPI using tablets.

The system aims at:

- Implementation of all CPI stages
- Provision of electronic programs and tools required for the price data collection (field collection) and transfer of data to the tablets, in addition to receiving data and transfer to the prices database.
- Ability to examine data accuracy and integration at all stages of the system, including preparation of the goods and services basket, the field work and calculating the index.
- Ability to calculate the CPI for any region of the Emirate (according to the geographical scope).
- Ability to deal with special situations that may arise during data collection or CPI calculation such as disappearance of goods, resources, and changes in the goods.
- Determining goods and services basket of the base year with the relative weights of the groups, in addition to calculating the prices of goods and services of the base year.
- Assisting data collectors while editing data by connecting the current data base with the previous one.

## **10. Publishing**

SCAD publishes the CPI and prices of consumer goods and service on a monthly basis, seven days after the end of the month. SCAD also publish annual CPI results and inflation rates. The CPI can also be provided on CDs upon request.

## **11. How to read the CPI**

The CPI reflects the rate of the change in the prices of a specified goods and services basket between three time periods, the base period and the comparison period. For example, if the price of the goods and services basket during a specified base period is AED 100, and the CPI of the comparison period was 105.0, this means that prices of goods and services increased by about 5%.

In order to measure the change in the prices of the current period and the previous period, the current CPI should be divided by the previous CPI, then multiplied by (100) and then 100 subtracted.
