Producer Price Index (PPI)

Manufacturing (2012=100)

Fourth Quarter
2016

Preliminary

Release Date: March 2017

Briefing

In the light of the rapid economic and social development in the Emirate of Abu Dhabi, price indices and indicators are considered key tools that express changes in the prices of industrial and commercial production and services. Indices are also considered important economic indicators that provide accurate data to decision makers, economists, researchers, policy makers and other users of official statistics. The remarkable economic development witnessed by Abu Dhabi Emirate has called for the construction of a statistical index that reflects the growth of the economic production sectors. Therefore, Statistics Centre – Abu Dhabi constructed the industrial producer price index for the Emirate of Abu Dhabi.

The Producer Price Index (PPI), which is calculated on a quarterly basis, cover the manufacturing sector. The PPI design is based on the main list of products of the industrial manufacturing activities in the International Standard Industrial Classification-revision 4 (ISIC4) which covers all manufacturing economic activities.

The calculated figures represent a time series that measures the changes in the production prices during a specific period compared with the base year 2012. SCAD follows the best international practices and methodologies for the calculation of the PPI and the processing of data. Further development of the PPI will cover more activities such as mining and quarrying, and water and electricity.

Key Points

1. The PPI in the fourth quarter of 2016 decreased by 6.1% compared with the same quarter in 2015, falling to 69.0% in the fourth quarter of 2016 from 73.5% in the fourth quarter of 2015.
2. In the fourth quarter of 2016, the PPI decreased by 2.7% compared with the third quarter of 2016, falling to 69.0% compared with 70.9% in the third quarter of 2016.
3. In 2016, the PPI decreased by 10.2% compared with 2015, falling to 70.0% compared with 78.0% in 2015.
